

PASSIVE CONTACT BOARD: seven independent paths. Pin 7 reserved, routed to pigtail.
Connect ONLY to an isolated, switched 3.3 V media interface; NOT controller RO J3.
Contacts must be de-energized during movement. Main-board isolation is separate unfinished work.
Harwin S7131-45R: top-down compression part; sliding wear/snagging still requires bench testing.
Soldered springs. Replace complete screw-mounted cartridge or desolder individual contact.
